MIDIPlayer X v3.0 Now Available

MethodRed has updated MIDIPlayer X, their popular MIDI file player for the Mac. Version 3.0 is a significant update with new features and an enhanced UI to make working with MIDI files easier and more efficient.

MIDIPlayer X is a fast, easy way to play MIDI files on your Mac. It works with virtually all commercial MIDI hardware and software, and will play any MIDI file to your choice of available MIDI outputs, either hardware or software, or to its own built-in GM-compatible virtual synth.

MIDIPlayer X also lets users customize MIDI files by muting, soloing or rechannelizing MIDI channels, changing tempos, and saving to a new MIDI file. Whether you need to listen to a single .mid file or audition hundreds, MIDIPlayer X makes it fast and easy.

"These latest features have been highly requested by our users, so we're excited to offer these enhancements for those who make MIDIPlayer X part of their MIDI file workflow", says MethodRed founder Doug Hanson.

What's New in Version 3.0
• Looping: accurate looping improves auditioning of drum and chord patterns
• Tempo Lock: lock the tempo so all files play at your desired tempo
• Rechannelize: reassign MIDI channels as needed
• Shuffle: randomize the playback order of loaded files
• Drag files out to drop into your DAW or desired Finder location
• Delete: unload any loaded file
• Show Filename: toggle display to show file's title or filename

Key Standard Features
• Plays any Standard MIDI File
• Works with your MIDI hardware and software
• Built-in GM-compatible synth
• Simple drag and drop operation

System Requirements
MIDIPlayer X requires macOS Sonoma (14.0)

Pricing & Availability
MIDIPlayer X v3.0 is a free upgrade for current owners.
MIDIPlayer X is available in the Mac App Store for $2.99.
